Dear Sir:

Re: Eldorado Gold Corporation ("the Company")
12g3-2(b)#82-3578

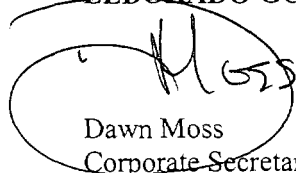

Further to the Company's exemption 12g3-2(b)#82-3578, we enclose a copy of the completed Securities and Exchange Commission Form 6-K and the following documents filed with the regulatory agencies in Canada.

1. News Release – November 25, 2002
2. Material Change Report – November 25, 2002
3. News Release – November 26, 2002

I trust you will find this filing in order.

Yours truly

ELDORADO GOLD CORPORATION

Dawn Moss
Corporate Secretary

NEWS RELEASE

ELD No. 02-18
November 25, 2002

ELDORADO GOLD ELIMINATES BANK DEBT AND HEDGE BOOK

VANCOUVER, B.C. - Paul N. Wright, President and Chief Executive Officer of Eldorado Gold Corporation (the "Company" or "Eldorado") (TSX: ELD) is pleased to announce the Company has eliminated its residual bank debt and gold hedge book.

"Our final payment today of US\$2.1 million to NM Rothschild & Sons Limited ("NMR") leaves the Company free of all bank debt and with a cash balance of approximately US\$8.9 million", commented Paul N. Wright, President and Chief Executive Officer. "Through a disciplined approach during a period of depressed gold prices, the Company has succeeded in eliminating US\$40.0 million of bank debt while retaining and progressing its core assets."

The Company has delivered the remaining 10,972 ounces of gold that was hedged at the end of the third quarter. Currently Eldorado does not have any gold or foreign currency hedge and is in a position to benefit from future increases in the gold price.

São Bento Mine and 40F Registration Update

The São Bento Mine continues to deliver strong operating performance and remains on target to meet or exceed the Company's 2002 production target of 105,000 ounces of gold at a cash cost of US\$185/oz. October's production was 10,050 ounces of gold at a cash cost of US\$167/oz., while in September 10,592 ounces of gold were produced at a cash cost of US\$172/oz.

The Company recently submitted its 40F registration and has commenced the process of listing on the American Stock Exchange.

Eldorado has superior gold assets in Brazil and Turkey, two countries with enormous geological potential. In Brazil we are focusing on the continuing improvement at the São Bento Mine and are systematically identifying opportunities to expand our business interests. In Turkey, we continue to expand our asset base, with a resource of approximately 8.8 million ounces in an increasingly attractive jurisdiction. With our international expertise in mining, finance and project development, together with highly skilled and dedicated staff, Eldorado is well positioned to grow in value as we create and pursue new opportunities.

ON BEHALF OF
ELDORADO GOLD CORPORATION

"Paul N. Wright"

Paul N. Wright
President and Chief Executive Officer

NEWS RELEASE

ELD No. 02-19
November 26, 2002

KISLADAG PROJECT UPDATE RESOURCE CONTINUES TO GROW – 7.9 M OZ.

VANCOUVER, B.C. - Paul N. Wright, President and Chief Executive Officer of Eldorado Gold Corporation (the "Company" or "Eldorado") (TSX: ELD) is pleased to provide the following update regarding the Kisladag Development Project in western Turkey. The Company remains on schedule in both its permitting activities and the completion of its Feasibility Study scheduled for March 2003.

RESOURCE ESTIMATE

An updated resource estimate is now complete for the project and will form the basis for the reserve estimation in the Feasibility Study. The revision reflects the completion of an additional 10,700 meters of reverse circulation and diamond core drilling completed in 2002. The principal objective of this drill programme was to upgrade classification of the resource. In addition, the total resource has been increased from the previously announced 7.3 M oz. (press release ELD 02-13 dated June 21, 2002) to 7.9 M oz.

Resource calculations provided are based on a revised geological model and include data from over 29,900 meters of drilling and trenching completed to date. Micon International Ltd. ("Micon") have reviewed duplicate samples, sample statistics, capping levels, composite formation, composite statistics and variography for all the data used in the resource estimate. Mr. Gary Giroux, Associate with Micon is the independent Qualified Person responsible for preparation of the resource estimate in accordance with National Instrument 43-101. Mr. Giroux visited the project site and the Company's sample preparation laboratory in 2002. The resource estimate shown in Table 1 has been prepared using a cut off grade of 0.4 g/t gold consistent with previous estimates.

Table 1 Resource: Measured Indicated and Inferred

| Classification | Tonnes | Grade g/t Au | Ounces |
|-----------------------|---------------|---------------------|---------------|
| Measured | 47,500,000 | 1.28 | 1,960,000 |
| Indicated | 118,900,000 | 1.07 | 4,090,000 |
| Measured & Indicated | 166,400,000 | 1.13 | 6,050,000 |
| | | | |
| Inferred | 69,100,000 | 0.81 | 1,808,000 |

Of the total Measured & Indicated Resource at a 0.4 g/t cutoff, approximately 828,000 ounces occur in oxide material with the balance in the primary ore.

Samples from the drill program are prepared at the Company's sample preparation facility in Turkey, according to procedures established by Micon and audited by Micon in 2002. Sample pulps are shipped to ALS Chemex Laboratory in Vancouver ("ALS") for gold fire assay with A.A. finish. ALS has attained ISO 9002 Registration by KPMG Quality Registrars for the provision of assay and geochemical analytical services. The Company has inserted duplicates, blanks and standards according to industry practice prior to shipment to ALS. Check assays carried out by Acme Laboratory in Vancouver have verified certified results.

METALLURGICAL TESTWORK

Amenability of the Kisladağ ore to recovery of gold using heap leach process techniques was established in earlier metallurgical testwork through a series of column leach tests carried out by Kappes Cassiday & Associates ("KCA") in Reno, Nevada. Composited samples of drill core taken from throughout the resource were used to establish that acceptable recovery of gold can be achieved from both oxide and primary ore at a crush size of 100% minus 8mm. KCA estimated field recovery from conventional cyanide heap leaching would return 80% recovery for oxide and 57% recovery for primary ore. These recoveries were incorporated into the Kisladağ Prefeasibility Study, prepared by Kilborn Pacific Engineers.

To corroborate previous results KCA conducted 11 additional column leach tests using representative samples collected from continuous runs of diamond drill core retrieved from the oxide and primary ore horizons. Results from the latest round of column leach tests completed prove to be confirmatory of the previous testwork and provide encouragement that ultimate recoveries may be higher than the 80% and 57% values used in the Prefeasibility Study.

Table 2 Column Leach Results 100 days

| KCA Test No. | Kisladağ Sample No. | Type | Extracted, % Au |
|---------------|---------------------|---------|-----------------|
| 30215 | Kis-97 | Primary | 74% |
| 30218 | Kis-98 | Primary | 62% |
| 30221 | Kis-99 | Primary | 73% |
| 30224 | Kis-100 | Oxide | 87% |
| 30227 | Kis-101 | Oxide | 83% |
| 30230 | Kis-102 | Oxide | 89% |
| 30233 | Kis-103 | Primary | 70% |
| 30236 | Kis-104 | Primary | 71% |
| 30239 | Kis-105 | Oxide | 85% |
| 30242 | Kis-106 | Oxide | 85% |
| 30245 | Kis-107 | Primary | 72% |
| Avg. Oxide | | | 86% |
| Avg. Primary | | | 73% |
| Over All Avg. | | | 78% |

- Both oxide and primary ores demonstrate consistent steep recovery curves with all of the oxide ore columns exceeding 75% recovery within 40 days of testing, while six of the seven primary ore columns exceed 60% within the same period. This consistency of performance and the initial recovery performance augur well for commercial operation.

Nineteen additional column tests are currently underway at KCA with the intent to further confirm the leachability of the Kisladag ore and examine the potential of coarser crushing of the oxide material whilst retaining demonstrated high recoveries. Results of this program will also be incorporated in the Kisladag Feasibility Study.

FEASIBILITY STUDY

Hatch Associates have advanced the Kisladag feasibility study through the preliminary design stage to arrive at appropriate production rates for the startup and expansion phases of the operation. Initial production rates are based on a crushing circuit utilizing one gyratory crusher feeding one secondary crusher and one tertiary crusher incorporating a closed circuit screening system. Maximum throughput in Phase I will be approximately 5.0 million tonnes per year, producing approximately 130,000 ounces annually in the first 4 years.

Production will be ramped up to approximately 10.0 million tonnes per year in Phase II by the duplication of the secondary and tertiary crushing and screening circuits. The gyratory crusher will have sufficient capacity at the outset for the higher throughput. Gold production will then increase accordingly to in excess of 250,000 ounces annually.

The above production figures are based on preliminary process design and pit optimization studies. Further refinement of the operating performance will be carried out as final design aspects of the mining and process operations are completed and incorporated into the Kisladag Feasibility Study due for release in the first quarter of 2003.

PERMITTING

The Company has engaged Encon Environmental Engineers, Ankara, Turkey working with Knight Piesold Associates, United Kingdom and Planning Alliance, Canada to prepare the Environmental Impact Assessment ("EIA") study for the Kisladag project. This study is scheduled for submission to the Turkish Ministry of Environment ("MOE") in mid December 2002. The MOE will then review the environmental, social and economic impacts of the project and proposed mitigation measures. This process is expected to take 4 to 6 months. Acceptance of the study will lead to issuance of an Environmental Positive Certificate.

Eldorado has superior gold assets in Brazil and Turkey, two countries with enormous geological potential. In Brazil we are focusing on the continuing improvement at the São Bento mine and are systematically identifying opportunities to expand our business interests. In Turkey, we continue to expand our asset base, with a resource of approximately 9.4 million ounces in an increasingly attractive jurisdiction. With our international expertise in mining, finance and project development, together with highly skilled and dedicated staff, Eldorado is well positioned to grow in value as we create and pursue new opportunities.
